

Installation guide

1. Install MySQL workbench

- Download MySQL workbench here:
(<https://dev.mysql.com/downloads/workbench/>)

2. Create a new connection

- Open workbench and set up a new connection with your preferred credentials

3. Create Project Schema

- In schemas, create a new schema named Airbnb project

4. Import the Database

- Download the [dump.sql file](#): (when you click the link it opens the file in your browser. Save it with any name of your choice, then use it in MySQL workbench)
- Go to server → data import
- Select import from self-contained file and choose the downloaded dump.sql file
- Select your Airbnb project schema and click start import

5. Access Project Files

- All project files are available on GitHub for convenient access
